PROFESSIONAL SUMMARY

3rd-year B.Tech Computer Science student at SRMIST (CGPA 8.92/10) with hands-on experience building AI-powered backend systems, agentic workflows, and full-stack web applications. Recently completed a Technology Internship building a multi-agent LLM system for healthcare claims automation. Seeking a Software Development Internship to apply strengths in Data Structures & Algorithms, system design, and Generative AI to real-world engineering problems.

EDUCATION

SRM Institute of Science and Technology (SRMIST) <i>Bachelor of Technology – Computer Science and Engineering</i> Current CGPA: 8.92 / 10.0 (3rd Year) Sri Chaitanya Institute <i>Class XII – Higher Secondary Education (PCM + CS)</i>	Chennai, Tamil Nadu 2024 – 2028 Completed 2024
---	--

EXPERIENCE

Omega Healthcare Management Services <i>Technology Intern – Agentic AI & LangChain</i> - Built an AI-powered Denial Management System with LangChain and Python to automate healthcare insurance claim triage. - Architected a sequential multi-agent workflow that routes claims through validation, classification, and decision stages without manual intervention. - Applied LLMs to healthcare data workflows to accelerate decision-making and reduce manual review effort for the claims team.	Remote (Chennai, India) Jun 2026 – Jul 2026
---	--

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, C, C++, HTML5, CSS3
Frameworks & Libraries: React.js, Next.js, Node.js, Flask, Spring Boot, LangChain, NumPy, Pandas, Matplotlib, PyTorch
Databases: MySQL
Core CS Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, System Design, REST APIs
Tools & Platforms: Git, GitHub, Vercel, VS Code, LaTeX, Markdown, Canva
Generative AI: Agentic AI, Large Language Models (LLMs), Machine Learning

PROJECTS

Claims Denial & Appeals Engine <i>Python, LangChain, Gemini</i> GitHub - Independently built a sequential LangChain multi-agent pipeline that analyzes {X} denied insurance claims from sample Excel data across {Y} pipeline stages and recommends targeted remediation actions. - Integrated Google Gemini to auto-generate print-ready PDF appeal letters, cutting manual drafting time from {X min} to under {Y min} per appeal.	2026
DropSure – AI Parametric Insurance for Gig Workers <i>Node.js, Python, REST APIs</i> GitHub - Built the Node.js backend engine and 3 third-party API integrations (weather, traffic, payments) for a 5-member hackathon team's parametric insurance PWA serving Q-commerce delivery riders. - Implemented rule-based payout logic auto-triggering claim-free payouts within 5 minutes when live thresholds (rainfall >15mm/hr, speed <5km/h) are breached, with dynamic weekly premiums (Rs. 20–Rs. 45) recalculated from 7-day risk forecasts.	2026
OCR Scanner <i>Python, PySide6, EasyOCR</i> GitHub - Built a cross-platform desktop OCR app supporting 4 image formats (PNG, JPG, JPEG, WEBP) with a drag-and-drop interface. - Implemented asynchronous background threading so the 15–20MB OCR model loads and processes images without freezing the UI.	2024

CERTIFICATIONS

Evaluation and Light Customization of LLMs | NVIDIA
Software Engineering Job Simulation | J.P. Morgan (Forage)
SQL Analytics and Business Intelligence on Databricks | Databricks
Programming in Java | NPTEL & IIT
